---

All,

I spoke to Anita about this, but wanted to make sure you were aware of the guidance we gave to Nebraska Extension and our NASDARF Cooperative Agreement partner regarding the modification of the original PowerPoint presentation.

We will let you know as soon as we receive the final edited package with the video clips inserted from NASDARF.

Please let Kathy or me know if you have any questions.

Hi Clyde and Carol,

I wanted to follow-up with you regarding the final PowerPoint presentation materials Kathy Davis sent you yesterday for the anticoagulant/rodenticide training. It has come to EPA's attention that there may be several slides contained in the presentation that have too much text or content on the slide for the slide to project properly and still keep all the content viewable on the screen. As a result, there may be a need or desire for you to split certain slides into multiple slides in order to make the presentation better from an educational standpoint (i.e., making it easier to read and comprehend by not cramming too much information into a single slide).

I wanted you to know that it is permissible for you to alter the format of the presentation and certain slides, as long as the overall content is preserved and none of the information in the presentation is eliminated in the process. This is necessary to ensure the overall content is preserved since the content was reviewed and approved by USFWS in order to meet their concerns, and we don't want the final package that is delivered by EPA to the States, Tribes and EPA Regions to differ substantially from that originally approved by them.

Please let me know if you have any questions or need additional clarification.

Hi Carol and Clyde -

I am forwarding the final PowerPoint presentation developed by EPA/OPP to meet our commitment to the U.S. Fish and Wildlife Service (USFWS) BiOP to develop rodenticide training for applicator recertification training programs in connection with the new labeling requirements that were required for continued registration of certain rodenticide products. This training was developed by our Environmental Fate and Effects Division with input and cooperation from our Branch, EPA Regions, States and Tribes, and USFWS. The training materials are specifically designed to address the range of concerns raised by USFWS during our consultations with them on endangered species concerns. This is the training presentation "material" that will eventually be distributed to States, Tribes and Regions as part of our commitment, once the video clips being developed and produced with the help of NASDARF and Nebraska are added/inserted in the presentation.

I wanted to send this to you now so you could see what the final training presentation looks like and see how to best incorporate the proposed video segments into the training presentation. Please let me know if you have any questions.

Thanks!  
Kathy Davis
